

# ResiliLytics Dashboard

Sourcing Intelligence for Resilient Supply Chains

## ResiliLytics Quick Start Guide

*Measure. Diagnose. Act.*

|                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Step 1 — Prepare Your File</b><br>Your spreadsheet must include: <ul style="list-style-type: none"><li>• Supplier</li><li>• Spend</li><li>• Country</li><li>• Historical_Costs (optional, semicolon-separated values)</li></ul> Example format:<br>Supplier   Spend   Country   Historical_Costs<br>A   100000   USA   95;100;105<br><i>Download the sample template if needed.</i> | <b>Step 2 — Upload Your Data</b><br>Go to Dashboard → Upload CSV or Excel.<br>The system automatically: <ul style="list-style-type: none"><li>✓ Validates structure</li><li>✓ Calculates 7 resilience dimensions</li><li>✓ Computes your composite score</li><li>✓ Classifies your structural posture</li></ul> <i>No setup required.</i> | <b>Step 3 — Review Your Score</b><br>Look at: <ul style="list-style-type: none"><li>• Composite Score (0–100)</li><li>• Classification band</li><li>• Primary Constraint Lens</li></ul> This tells you where your structural vulnerability lies. |
| <b>Step 4 — Check Impact Ranking</b><br>Scroll to Impact Ranking Table.<br>Focus on dimensions with highest Weighted Impact. These are your priority mitigation drivers.                                                                                                                                                                                                               | <b>Step 5 — Generate AI Insights (Optional)</b><br>Click: “🔮 Generate AI Insights”<br>Review: <ul style="list-style-type: none"><li>• Executive Insight</li><li>• Risk Transmission Pathway</li><li>• Priority Mitigation Actions</li><li>• 90-Day Roadmap</li></ul>                                                                      | <b>Step 6 — Test Improvements</b><br>Use Scenario Simulation Mode to: <ul style="list-style-type: none"><li>• Reduce concentration exposure</li><li>• Reduce volatility intensity</li></ul> Watch your score update in real time.                |
| <b>Important Notes</b> <ul style="list-style-type: none"><li>✓ This is a structural resilience tool — not predictive forecasting.</li><li>✓ Data is not stored.</li><li>✓ The system is non-commercial and research-based.</li></ul>                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                  |
| <b>The Philosophy</b> <ul style="list-style-type: none"><li>✓ Risk → Structure → Diagnosis → Action</li><li>✓ Resilience is not the absence of disruption.</li><li>✓ It is the capacity to absorb it.</li></ul>                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                  |
